

EM•1

EM•1 Waste Treatment: For Septic Systems

Ingredients: Water, Molasses, Lactic Acid Bacteria, Yeast, and Phototrophic Bacteria.

Uses: For septic systems applications, on-site systems, holding tanks, recreational vehicles, boats, and portable restrooms.

Use according to directions. NOT RECOMMENDED FOR ANIMAL OR HUMAN CONSUMPTION.

Directions: Pump out the septic system. Wait about two weeks before application.

• **For septic systems/on-site systems**

Apply one liter of EM•1 Waste Treatment: For Septic Systems per 1,000 gallons holding capacity every three months by pouring down a drain in the house or directly into the septic system.

Note: maintain your septic system properly. Have your septic system regularly serviced as recommended by a septic professional. EMRO USA Effective Microorganisms does not claim that a septic system should not be pumped on a regular basis. Our product is applied to promote a healthy bacterial balance within your septic system/on-site system.

• **For small holding tanks**

Apply about 2 ounces per every 10 gallons holding capacity.

Consult with your Certified EM Provider (CEMP) for specific instructions.

Storage: Store EM•1 Waste Treatment: For Septic Systems at room temperature (55° to 80° F) out of direct sunlight; away from dust. Keep container closed and airtight. Use by expiration date.

Expiration date:
